

1. Where do you want to build your house? It could be at the North Pole, in space, in the desert, under water or maybe even a houseboat...

2. How should your house look like and what is needed to survive in an "extreme place"? Walls made of wood, glass, metal or concrete? after all, Do you need windows, a sewerage system, heating, air conditioning, a glass house etc.?

3. How is your house heated or cooled? What type of energy production is the best solution for your house? Is it renewable energy like wind, water, solar, geothermal or biomass? Do you need coal or wood or even nuclear energy?

4. Is there anything else you really want to include in your house? Something cozy, beautiful or something especially practical, perhaps?
